MON A · THE IMPACT AND EASE GRID

All three problems placed, three or four bullets each. Photograph the sheet.

Photo

Which one, and why

Three problems were named. You scoped one. Put all three on this grid and see whether it agrees with you.

Name Nasir Muhammad

Date 9/2/17

High impact	Worth it big change, hard to get funder reports School data broad deck funder reports	Do this first big change, least work funder reports broad deck
Low impact	Skip it little change, lot of work	Cheap wins small, but nearly free

Harder

Easier

Pushes it left, harder

Touches more than one organization
Nobody has written down how it works today
More than one person has to change what they do
You would have to ask someone who was not in the room

Pushes it right, easier

One person, one system
There is already a form or a file for it
They have already tried to fix it themselves
Use those to think, not to score.

Where each one landed, and why

The workflow	Quadrant	Why there
funder reports	worth it	lost story a week and three people 8-10x/year
School data	worth it	nobody's written it down and need mission critical are we funding the right
broad deck	worth it	Schools "keep's story up at night" real financial risk - caused an actual overspend incident.

The one I scoped, and whether this grid agrees with what I told the client

funder reports agrees - most internal no outside vendor

One thing inside my chosen workflow that would sit low and left on this same grid

School-name mismatch - real but doesn't touch the actual bottleneck

LO-U1-P1-T08 - Elevate 215 scope package

Guide on the back

The problem	Quadrant	Why there
Funder reports	Worth it	High impact — costs Stacy a week and three people, 8-10x/year, worse in fall. Hard — nobody's written down how it works today, more than one person has to change what they do (Renée and Priya), and you'd need people not in the room before a fix is real.
School data (index)	Worth it	High impact — mission-critical; Stacy said "are we funding the right schools" keeps her up at night. Hard — touches an outside consultant, the error-catching process is just Marcus's habit, not documented, and you'd need Marcus specifically before knowing if richer data is even feasible.
Board deck (monthly close)		High impact — real financial risk, caused an actual incident (restricted-grant overspend caught live in finance committee). Hard — touches an outside accounting firm, more than one person has to change what they do (Priya, the firm, Stacy).

Does the grid agree with what you scoped in T05?

☒ Agrees

☐ Does not agree

If it does not, which answer are you taking?

☐ My reasoning was thinner than I thought. The grid is the better argument and I am changing what I tell the client.

☐ The client told me this one mattered most. Their words:

MON B • THE PAPER PASS

Filled by hand and signed before you open a laptop.

Photo

Every funder is a from -	structure & query-able notes	less time per report
Noone checks it before it's sent	Priga reviews before sending	Mistakes Caught before the funder sees them
I chase funder reports time is a gear it's out and it's	a week and there and she pushes back more fixable or	people, right to ten hard when I almost left the three.

Dimensions: duration - effort - accuracy - consistency - visibility - dependency

WHAT IS STILL OPEN

The question	Who answers it
where dose Renee's tag actually live and who reads it Stacy or a reporter	reneé
Is this a tool Stacy can query herself or a report a analyst runs and sends her	reneé, marcus or Dev
when dose Priga review happen and what does she see a draft an email row number	Priga
Has grants management system actually been evaluated with Dev or is it still some	Dev

What I need from them

What	Who provides it	By when
whether the tagging trade actually work for Renee under real	Renee	before thursday
whether Priga has time to review reports is it right person	HR Priga	before thursday
whether richer public data is actually feasible to pull in	Marcus	before thursday

SIGN-OFF. FOUR CHECKS.

- ✓ The workflow choice gives a reason, not a preference
- ✓ Every change points at a red mark on the map
- ✓ At least one change names what they get back, on one of the six dimensions
- ✓ Every open question names a person

Ahead. Read section 3 out loud. If either reason sounds like yours instead of theirs, go find their words.

Behind. Ready for Tuesday when you have a filled grid, a signed paper pass, and something in all four sections.
